Approximately 175 books dealing with "the experience of black people" in America and produced by both black and white authors are listed in this bibliography. Entries include not only accounts of black personal experience--autobiography, poetry, and fiction--but also social and historical documents, anthologies, and specialized studies. A few items on African culture supply an anthropological cross-cultural viewpoint. The books are classified into four age groups (5-8, 9-12, 13-15, and high school-adult), brief annotations are provided, and paperback editions are noted. (LH)

INTRODUCTION

This selection of books dealing with what might be called "the Negro experience" or "the experience of black people" is comprehensive and well-balanced. An understanding of the experience of black people in the United States requires some familiarity with a solid body of factual knowledge provided by history and biography, as well as insights communicated through literature and autobiography. This list contains a wide range of all of these types of material. These books have been produced by both black authors and white, for the destiny of white men and black men has been so intertwined that the works of both are essential for a complete and rounded documentation of race relations. Careful consideration has been given, however, to the inclusion of accounts of personal experience--autobiography, poetry, and fiction--of Negroes, without which there can be no depth of understanding.

Misinformation and omitted information have made it very difficult for anyone to secure a clear picture of the history of the black people in the U.S.A. The work of scholars who have corrected the distortions and supplied the missing pages is well represented, both in the forms of integrated narratives as in Lerone Bennett's Before the Mayflower and through documents and specialized studies. A few well-chosen items on Africa supply the need for historical and anthropological cross-cultural perspective, and classification of items by suitability for various age groups is a particularly useful feature of this reading guide.

The material here includes some of the best of what is currently available. The task of fully correcting the distortions, and writing the missing pages of American history to include the black man in his honorable and rightful place will take time. This generation of young people cannot wait until new, accurate textbooks are written and published. Happily, many authors outside of the textbook field have been sensitized to the need for such material, and new books are appearing on publishers' current lists.

It is the job of all of us to continue to search for and demand more of such honest and accurate documentation so that it may be brought into the classroom, the settlement house, the scout troop, the library and the home. Only in this way will the real story of America's past become known.
